

HEALTH CARE ORGANISATION

Product Model: MT90G tracker | Region: Melbourne, Australia | Date: 2017

Home Care for Dementia Patients

With the rise in the number of dementia patients, MT90G GPS tracking devices have become a great option to provide peace of mind for caregivers and family members. This model works as a pendant that can be put in a bag or pocket, and it allows caregivers to track the patient anytime and anywhere, providing accurate real-time locations. Caregivers can also set a virtual zone for the patient and will be alerted if the person wanders out of range. They can listen in to hear what is happening around this person. Besides, this unit allows emergency response and two-way voice communication at the touch of the SOS panic button.

Key Benefits:

- Provide 24/7 monitoring service
- Trigger automated alerts
- Increase safety

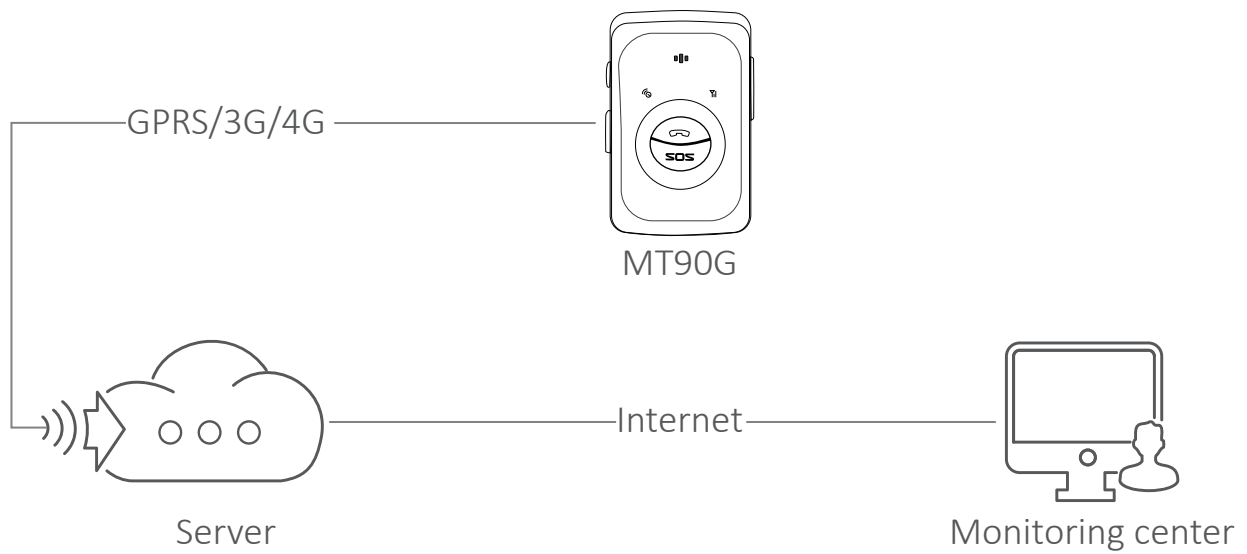

Personal Safety Solution for Doctors and Nurses

Because treating and caring for mental patients in their homes entails a great deal of risk to doctors and nurses, MT90G GPS tracking devices have become an increasingly good way to keep them safe. Once a doctor or nurse visits mental patients, the unit will capture what time he arrives at and leaves their homes, which will help provide a precise depiction of working pattern. If the healthcare worker feels bad things are around the corner, he can make phone calls to the healthcare organization at the touch of the SOS button. The healthcare organization will quickly pinpoint the location, listen in to hear what is happening around the home, and offer help to him in a timely manner.

Key Benefits:

- Improve safety of healthcare workers
- Keep track of healthcare workers in real time
- Facilitate attendance management

Solution

About Meitrack

Meitrack Group established in 2002, is headquartered in Shenzhen, China. Since its foundation, Meitrack has dedicated itself to the on-going pursuit for excellence in the Telematics field. In doing so, Meitrack has grown to become a leading Telematics and solutions provider.
