GARBAGE TRUCK MANAGEMENT

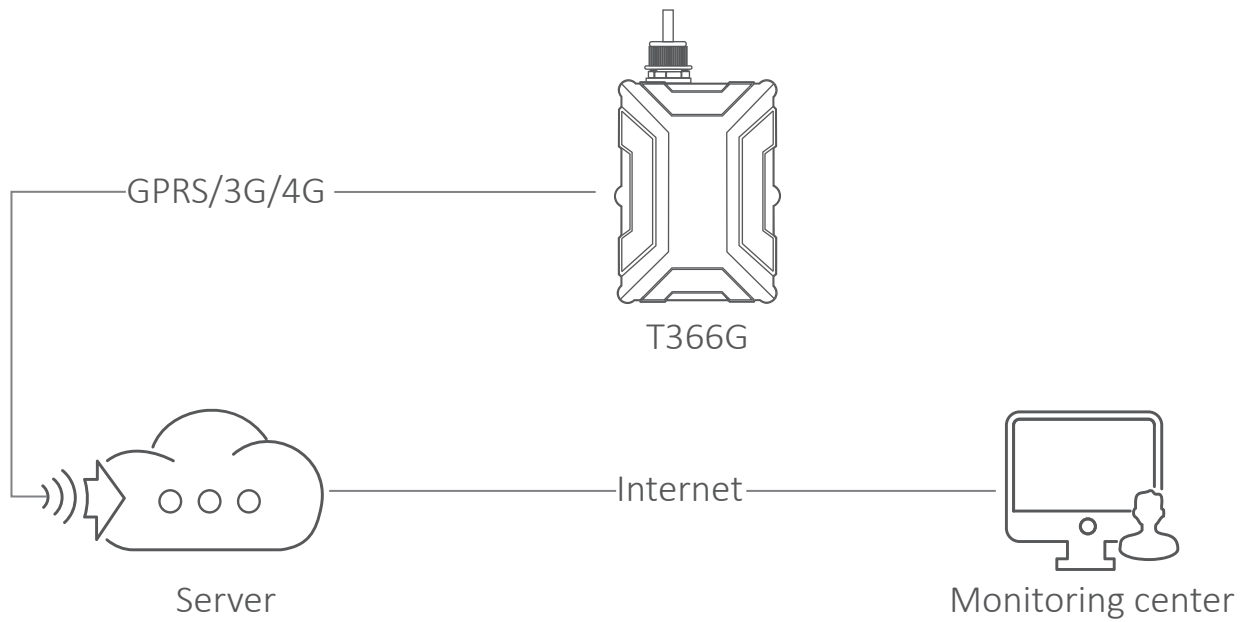

GPS Fleet Tracking for Garbage Trucks

The GPS fleet tracking solution is specially designed for waste management companies. With the installation of T366G GPS vehicle trackers onto garbage trucks, waste fleet managers will know when garbage trucks start moving and stop moving, where they are in real time, how fast they are going, and when they arrive at the destination. Once receiving tasks from customers, waste fleet managers can easily dispatch the closest garbage truck to the work place, which helps workers do their job more efficiently. In addition, this solution will help waste management teams monitor unsafe driving behaviors (speeding, harsh acceleration, harsh braking, etc.) and take immediate actions with automated alerts.

Key Benefits:

- Always know the status of garbage trucks
- Enhance overall fleet performance
- Cut fuel costs and optimize fleet management
- Improve driver safety

Solution

About Meitrack

Meitrack Group established in 2002, is headquartered in Shenzhen, China. Since its foundation, Meitrack has dedicated itself to the on-going pursuit for excellence in the Telematics field. In doing so, Meitrack has grown to become a leading Telematics and solutions provider. Aiming at sound and stable development and adhering to the strategy of "going global", we have a global reach with offices in California, Hong Kong and Taiwan, a growing international distribution network, and capability to deliver services in more than 170 countries and regions worldwide.
